Education

Columbia University

Master of Science in Computer Science

September 2025 – May 2027

New York, New York

Northeastern University

Bachelor of Science in Computer Science, Minor in Mathematics – GPA: 3.95/4.0

August 2021 – December 2024

Boston, Massachusetts

Experience

Databricks

Incoming Software Engineer Intern

May 2026 – August 2026

Bellevue, Washington

Stripe

Software Engineer Intern

January 2026 – May 2026

Seattle, Washington

- Developing infrastructure to minimize latency caused by cross-region requests, while still maintaining high service availability.

Amazon

Software Engineer Intern

June 2025 – August 2025

Seattle, Washington

- Cut duplicate support tickets by **100/month** by designing and deploying **Access Sage**, an LLM-powered tool written in **Java** that interprets customized access policies and provides instant explanations for access failures.
- Utilized the **AWS CDK** to architect an event-driven summarization pipeline using **S3, Lambda, and SQS** to asynchronously process and store rule summaries, ensuring low-latency UI responses.
- Integrated the tool into the team's **Java/Spring Boot** backend and **Vue** frontend, enabling real-time visibility into user permissions and missing requirements.

Klaviyo

Software Engineer Co-op

January 2025 – May 2025

Boston, Massachusetts

- Designed and launched a high-throughput SMS logging system using **Python, Django, and MySQL**, supporting **80K+ inbound messages/hour** with full idempotency guarantees.
- Automated asynchronous job processing via **Terraform-provisioned RabbitMQ queues and Celery workers**, enhancing system scalability and enabling parallel task execution.
- Overhauled **Grafana** monitoring dashboards for inbound pipelines, improving observability and cutting new channel onboarding time by **30%**.

Pacific Northwest National Laboratory

Software Engineer Intern

May 2024 – December 2024

Seattle, Washington

- Developed a comprehensive illicit finance analysis dashboard for over **30** analysts using **TypeScript, React, Python, and AWS**.
- Architected a flexible LLM API using **FastAPI** and **Pydantic** to streamline data analysis workflows for a team of **7** data scientists and engineers.
- Constructed a data ingestion service to process over **1.6 million** rows of financial data every week using the **AWS CDK Infrastructure-as-Code** solution to set up **Lambdas, S3 buckets, and SNS alerts**.

Projects

Couplet | *Golang, GORM, TypeScript, React Native, Expo, PostgreSQL*

May 2024

- Teamed up with 6 other engineers and 4 designers to build a dating app designed to connect people through common interest in events around Boston.
- Launched 13 REST API endpoints for the management of users, events, and organizations using Go, GORM, and PostgreSQL.
- Built seamless mobile app interactions and experiences with React Native and Expo.

Distributed Key-Value Store | *Golang*

April 2024

- Designed a fault-tolerant distributed key-value store using Golang and the RAFT consensus protocol.
- Utilized local ports and UDP packets to simulate an unreliable network with various conditions, including packet loss, network delays, and data corruption.

Technical Skills

Languages: Python, Golang, TypeScript, Java, SQL, Haskell

Technologies/Frameworks: AWS (EC2, S3, Lambda, RDS), Git, Docker, Django, React, Node, FastAPI, Linux
